Performance Data Sheet

Multipure Drinking Water Systems have been tested and certified under NSF/ANSI Standard No. 53 as shown below. The concentration of the indicated substances in water entering the system was reduced to a concentration less than or equal to the permissible limit for water leaving the system, as specified in NSF/ANSI 53 HEALTH EFFECTS.

Model Nos. CB-VOC-SB, CB-VOC-SC, CB-VOC-SI, CB-VOC-SB-PID

** Percent reduction reflects actual performance of Multipure product as specifically tested (at 200% of capacity). Percent reduction shown for VOCs* reflects the allowable claims for Volatile Organic Chemicals/Compounds as per Tables. Chloroform was used as a surrogate for VOC reduction claims; the Multipure Systems actual reduction rate of Chloroform was >99.8% as tested (at 200% capacity).

Note: This addresses the U.S. Environmental Protection Agency (USEPA) Primary and Secondary Drinking Water Regulations in effect at its time of publication, as they related to Multipure’s performance in conformance to the industry performance criteria. These regulations are continually being updated at the Federal level. Accordingly, this list of MCLs will be reviewed and amended when appropriate.

Multipure Drinking Water Systems
7251 Cathedral Rock Drive ● Las Vegas, NV 89128 ● 866.622.9373
www.multipureplus.com
FOOTNOTES:

1. Multipure Drinking Water Systems have been certified, as indicated, by NSF International for compliance to NSF/ANSI Standard Nos. 42 and 53.
2. The Multipure Drinking Water Systems have been certified by the State of California Department of Public Health for the reduction of specific contaminants listed herein.
3. Chloroform was used as a surrogate for claims of reduction of VOCs. Multipure Systems tested at >99.8% actual reduction of Chloroform. Percent reduction shown herein reflects the allowable claims for VOCs as per tables in the Standard.
4. Do not use with water that is microbiologically unsafe or with water of unknown quality without adequate disinfection before or after the unit. Systems certified for cyst reduction may be used on disinfected waters that may contain filterable cysts.
5. Filter life will vary in proportion to the amount of water used and the level of impurities in the water being processed. For optimum performance and to maintain your warranty, it is essential that the filter be replaced when the first of the following occurs: (a) annually; (b) when the unit's rated capacity is reached; (c) the flow rate diminishes; (d) the filter becomes saturated with bad tastes and odors.
6. Model No. CB-VOC-SB-PID includes a capacity monitor that automatically flashes red when it is time to replace your filter.
7. Multipure Drinking Water System housings are warranted for a lifetime; all exterior hoses and attachments to the System are warranted for one year. Please see the Owner's Manual for complete product guarantee and warranty information.
8. Please see the Owner's Manual for installation instructions and operating procedures.
9. In compliance with New York law, it is recommended that before purchasing a water treatment system, NY residents have their water supply tested to determine their actual water treatment needs. Please compare the capabilities of the Multipure unit with your actual water treatment needs.
10. While testing was performed under standard laboratory conditions, actual performance may vary.
11. The list of substances which the treatment device reduces does not necessarily mean that these substances are present in your tap water.

NSF/ANSI 42 - AESTHETIC EFFECTS

The systems have been tested according to NSF/ANSI Standard No. 42 for the reduction of the following substances. The concentration of the indicated substances in water entering the system was reduced to a concentration less than or equal to:

<table>

The water treatment device(s) listed on this certificate and the testing requirements pursuant to Section 116034 of the Health and Safety Code for the following health related contaminants:

- Arsenic
- Barium
- Cyst
- Lead
- Mercury
- Methylene chloride
- Methyl tert-butyl ether
- Mucorales
- Mucoromycota
- Mycotoxins
- Naphthenic acids
- Nitrate
- Nitrite
- Odor and taste
- Organics
- Perfluorinated compounds
- Perchlorate
- Phenol
- Plastics
- Pesticides
- Pharmaceutical
- Polycyclic Aromatic Hydrocarbons
- Polychlorinated Biphenyls
- Polychlorinated naphthalenes
- Polyurethane
- Radionuclides
- Radionuclides (99mTc, 131I, 137Cs)
- Radionuclides (Thallium, Sodium-22, Iodine-131, Carbon-14)
- Reductive
- RfC
- RfD
- Secondary organic (volatile and nonvolatile)
- Secondary organic (volatile and nonvolatile)
- Selenium
- Silicon carbide
- Sulfate
- Toluene
- Trichloroethylene
- Trihalomethane
- Trihalomethanes
- Volatile organic
- Volatile organic
- Volatile organic
